United States Army Security Assistance Command

What are FMS Case Analyzer and 9YD Analyzer?

FMS Case Analyzer - Case level data on schedule logistically, financially, for closure and over all

9YD Analyzer – Requisition level logistics data on schedule for Case Execution timeframes and milestones

United States Army Security Assistance Command

The Basics, both Analyzers:

Location – USASAC IntrAnet, password protected

Data Source – Army legacy database, CISIL

Updates – daily

Business Rules – some from existing CISIL logic, remainder developed in conjunction with the Army Life Cycle Management Commands

Capabilities:

- Data sorts
- Canned and Ad Hoc queries that can be saved
- Report and graph creation
- Report/data export

Ad Hoc Query Wizard

Current View: **"Overall Performance on FMS Cases"**

Instruction: The current view provides performance data on all FMS Cases. The Ad Hoc Query Wizard allows the user the ability to further filter these cases based on the selection(s) below. The cases can be filtered based on 'Country' or 'Supply Condition' or 'Alert Condition(s)' or a combination of these criteria. To select one or more criteria for filtering, check the appropriate box and selecting the corresponding value. The wizard automatically generates and displays the query statement to the user for review.
